Profile

PhD in Human-Computer Interaction with experience in applied **behavioral research** and **CRM consulting**. I use **mixed methods** and data analysis to understand behaviours, needs and technology use, evaluate interventions, and translate evidence into actionable recommendations. My research has focused particularly on human interaction with AI and adaptive systems, combining experimental, **quantitative** and **qualitative** approaches.

Experience

- Fév 2021 – Sep 2024 **PhD candidate in Human-Computer Interaction**, ISIR, Institut des Systèmes Intelligents et de Robotique – Paris, France
- Designed and conducted two between-subject controlled experiments (50+ participants) combining behavioural, physiological (**EMG**) and self-reported data to investigate **human-AI interaction** and learning
 - Analyzed behavioural, performance and physiological data with **Python** (pandas, NumPy) to measure the effects of adaptive AI systems and identify patterns across participants
 - Conducted **qualitative** field research with international collaborators, including interviews and **thematic coding** (Taguette), to investigate how professional artists adapt their practice around generative AI tools (CHI 2026)
 - **Coordinated interdisciplinary research** involving HCI, machine learning and engineering collaborators, and communicated findings through publications (Scientific Reports 2024, ACM IUI 2024) and international conferences
- Juil 2015 – Juil 2018 **Salesforce Consultant**, Spoon Consulting – Mauritius
- Analyzed **business and user needs** and translated them into functional requirements for CRM solutions
 - Acted as an interface between business and technical teams throughout solution implementation
 - Monitored project deliverables and supported users in the **adoption** of new CRM tools

Education

- Fév 2021 – Sep 2024 **Sorbonne Université**, Doctorat en Human-Computer Interaction – Paris, France
- Aoû 2018 – Aoû 2020 **Université Grenoble Alpes**, Master en Sciences Informatiques (MoSIG) – Grenoble, France

Skills

Data Analysis: **Python** (pandas, NumPy), **quantitative** analysis, Power BI, SQL

Behavioral & Impact Evaluation: Hypothesis development, **evaluation frameworks**, indicators, impact measurement, evidence synthesis

Human-AI Interaction: AI **adoption** and **appropriation**, adaptive systems, **human behaviour**, technology use, AI evaluation

Applied Research: Experimental design, literature review, interdisciplinary collaboration, interviews, user research, **evidence-based** recommendations

Project Coordination: Cross-functional collaboration, stakeholder communication, deliverable tracking, requirements gathering

Certifications

- Power BI PL-300 — Microsoft Data Analyst Associate
